FIXTURE CARRIERS

Concealed Arms UNITRON® II Features

JOSAM concealed arm Lavatory Carriers secure and support lavatories by means of cast iron arms with leveling and securing devices. By virtue of their design, they accommodate all types of lavatories punched for concealed arms. The cast iron arms are furnished as standard in three different lengths. The leveling and securing methods are the same for each arm length. After the carrier is installed and the walls completed, the sleeve and arm assembly is adjusted and installation of the lavatory is made by sliding it over the arms, leveling it through the access holes provided and then securely locking it in place with the LAVALOC® Securing Device.

HEAVY-DUTY INVERTIBLE RECTANGULAR STRUCTURAL **HEADERS UPRIGHTS** The heavy-duty cast iron Josam has selected heavy-duty invertible headers supplied with structural steel uprights as the JOSAM floor-mounted carriers standard for floor-mounted can be installed as shown or carriers. These uprights are inverted and installed on the narrow, for use in drywall outside of the upright. The tie construction, yet will support rod is secured in place against more weight than the round the upright by the header, tubular uprights. eliminating need for set screws. HEAVY-DUTY WELDED FEET The rectangular structural steel uprights are furnished with welded feet designed for use in today's modern drywall construction. They must be bolted to the floor. Recommend 1/2" bolts by others.

17100 SERIES CONCEALED ARM LAVATORY CARRIER SHOWN SUPPORTING A 300 POUND LOAD ON A WHEELCHAIR LAVATORY

Today's thin-wall construction demands that the carrier support the fixture completely independent of the wall construction, whether it is a lavatory, sink, urinal or water cooler. Due to the rectangular structural shape of the uprights and the welded feet, deflection is kept to a minimum, protecting the fixtures as well as the finished wall surface, thus eliminating the need for any alternate steadying methods. It is recommended, with all JOSAM carriers, that the feet be securely bolted to the floor for proper support. Rectangular structural uprights with welded feet are furnished with all floor-mounted JOSAM concealed, exposed arm or plate type carriers as standard, therefore there is no additional charge for this feature.

Standard Plate Features

JOSAM, after testing and studying many alternates for plate type carriers, has designed and developed a standard hanger support and bearing plate, that can accommodate more than 300 various fixtures.

A complete, easy to use "Standard Plate Application Manual" is included with every carrier. This manual gives the various plate dimensions required for a complete installation.
